

## ABSTRACT OF THE DISCLOSURE

Compliance with subscriber job delivery requirements is managed and tracked. Job delivery requirements set forth in service level agreements are stored electronically as delivery parameters. A queue manager creates a prioritized list of delivery jobs. A delivery manger delivers the jobs in accordance with the prioritized list. A routing manager determines optimal routes, *e.g.*, least cost route for delivery of each job. Retries of jobs that are not successfully delivered can be performed. delivery job sources include broadcast subscribers, high- and low-priority single address subscribers, free subscribers and off-peak subscribers.
